

# United States Patent [19]

Kramer et al.

[11] Patent Number: 4,927,806

[45] Date of Patent: \* May 22, 1990

[54] SATURATED SALT/CONCENTRATED DEXTRAN FORMULATION TO TREAT HEMORRHAGE

[75] Inventors: George C. Kramer, Davis; Paul R. Perron, Citrus Heights, both of Calif.

[73] Assignee: The Regents of the University of California, Berkeley, Calif.

[\*] Notice: The portion of the term of this patent subsequent to Mar. 13, 2007 has been disclaimed.

[21] Appl. No.: 41,605

[22] Filed: Apr. 23, 1987

## [57] ABSTRACT

A highly concentrated solution is provided which is both hyperosmotic and hyperoncotic with respect to blood plasma and has utility in treating patients experiencing or threatening to experience hypodynamic shock. The physiologically acceptable solution comprises a crystalloid to provide an osmolarity in excess of 5000 mOsm and a colloid to provide an oncotic pressure in excess of 200 mm Hg. The solution is easily transported and administered by a single, rapid infusion of about less than about 1 ml/kg of body weight and results in a rapid and sustained normalization of circulatory function.
